Geographical Information System (GIS) has become a major component of modern life and the contribution of this system in daily life has been increasing by the new invention of technology and methods. GIS and its application were very limited in marine fisheries, but now scenario is changing with development of successful protocols for application of GIS in marine fisheries in India. GIS has made strong footprint with advanced technology in identifying the geographical location of fishing areas, making digital database with better presentation methods like maps, graphs, diagrams, layer illustration etc., analyzing the species database with oceanographic environments to protect marine biodiversity and conserve the marine ecosystem. GIS and its technologies have added a new scope in marine fisheries by applying its tools for extracting scientific output from the collected data.

Objectives

To create acquaintance about spatial analysis techniques, software that analyses data about geographical database through the use of GIS
